The logo icon consists of a dark blue, stylized shape resembling a roof or a bar chart. Inside this shape, there are three vertical bars of different colors: orange, green, and blue, arranged from left to right. The bars have a slight gradient and are separated by thin white lines.

VIEW FUNCTION

ARGUMENTS → VIRTUAL DOM

the elm architecture

APPLICATION STATE

JavaScript

DOM + globals

React

components + stores

Elm

1 immutable value

Object-Oriented vs Functional

Elm has no **components**

different paradigm to learn

Dynamic Types vs Type-Checked

“if it compiles, it usually just **works**”

cheaper refactoring → **less technical debt**

more time in the console, less in the browser

IMPACT ON VELOCITY

JS: Quicker to get something on the screen

Elm: Higher overall velocity

Interoperating with JavaScript

Elm code talks to JavaScript
the way it talks to servers

JAVASCRIPT AS A SERVICE

MAINTAIN GUARANTEES

while accessing the huge

JAVASCRIPT ECOSYSTEM

npm

much bigger than elm-package ecosystem

publish JavaScript, binaries, etc.

may also install keyloggers

elm-package

installing packages can't install keyloggers

supports Elm code, not arbitrary JavaScript

semantic versioning automatically enforced

elm-package

less available off-the-shelf, more DIY

~~write a wrapper around moment.js~~

write a Date library in pure Elm

long-term ecosystem quality

how will we...

INTEGRATE it into our code?

TEACH it to our teammates?

BUILD and deploy it?

MINIMAL RISK

MAJOR REWARD

how will we **BUILD** it?

~~Sprockets (Rails)~~

Webpack loader

elm-make

ADVANCED BUILDS?

What about...

Code Splitting

Server-Side Elm

Server-Side Rendering

“Why not use _____ instead?”

delight

Detected errors in 1 module.

```
-- ALIAS PROBLEM ----- ././Maze.elm
```

This type alias is recursive, forming an infinite type!

```
21|>type alias Node =  
22|>   { x : Int  
23|>   , y : Int  
24|>   , children : List Node  
25|>   }
```

When I expand a recursive type alias, it just keeps getting bigger and bigger. So dealiasing results in an infinitely large type! Try this instead:

```
type Node  
  = Node { x : Int, y : Int, children : List Node }
```

This is kind of a subtle distinction. I suggested the naive fix, but you can often do something a bit nicer. So I would recommend reading more at:
<<https://github.com/elm-lang/elm-compiler/blob/0.17.0/hints/recursive-alias.md>>

“That should be an inspiration for every error message.” —John Carmack

how will we **HIRE** anyone?

11 developers hired in 2016

9 cited **Elm** as a reason for applying

hiring was much harder before we used Elm!

WHICH JOB POSTS STAND OUT?

Hiring for React, Redux, Immutable.js, Babel

Hiring for Angular 2, TypeScript, Ramda

Want to come write **Elm** full-time?

how will we **TEACH** it?

more new hires already know **React** than **Elm**

similar time to becoming prod contributor

compiler aids beginner learning a **LOT**
