

LiquidityHub

High Volume Low Latency Transaction Processing

Presenters: **Tony Harrop**, CTO, LiquidityHub
Jeremy Vickers, Technical Architect, Detica

Date: 12th March

Reference: QCon 2008

Contents

- Overview of LiquidityHub
- Key challenges
- Technology overview
- Outcome
- Lessons learned

Overview

- Current Situation
 - Interest Rate Swaps
 - Manual process
 - Multiple sources
 - Trading mechanism risk on dealer

Overview II

- Current Market Environment
 - Introducing change in a volatile environment
 - Change vs. execution confidence

CREDIT CRUNCH

'Market can find
solution to sub prime
debt crisis'

volatile markets...

Overview III

- LiquidityHub Vision
 - Build platform that enables access to multiple sources
 - Leverage existing distribution channels
 - Platform must scale to include future products
 - Offer Request for Stream with real time pricing
 - More transparency, better pricing
 - Enable STP, reduce costs

Overview IV

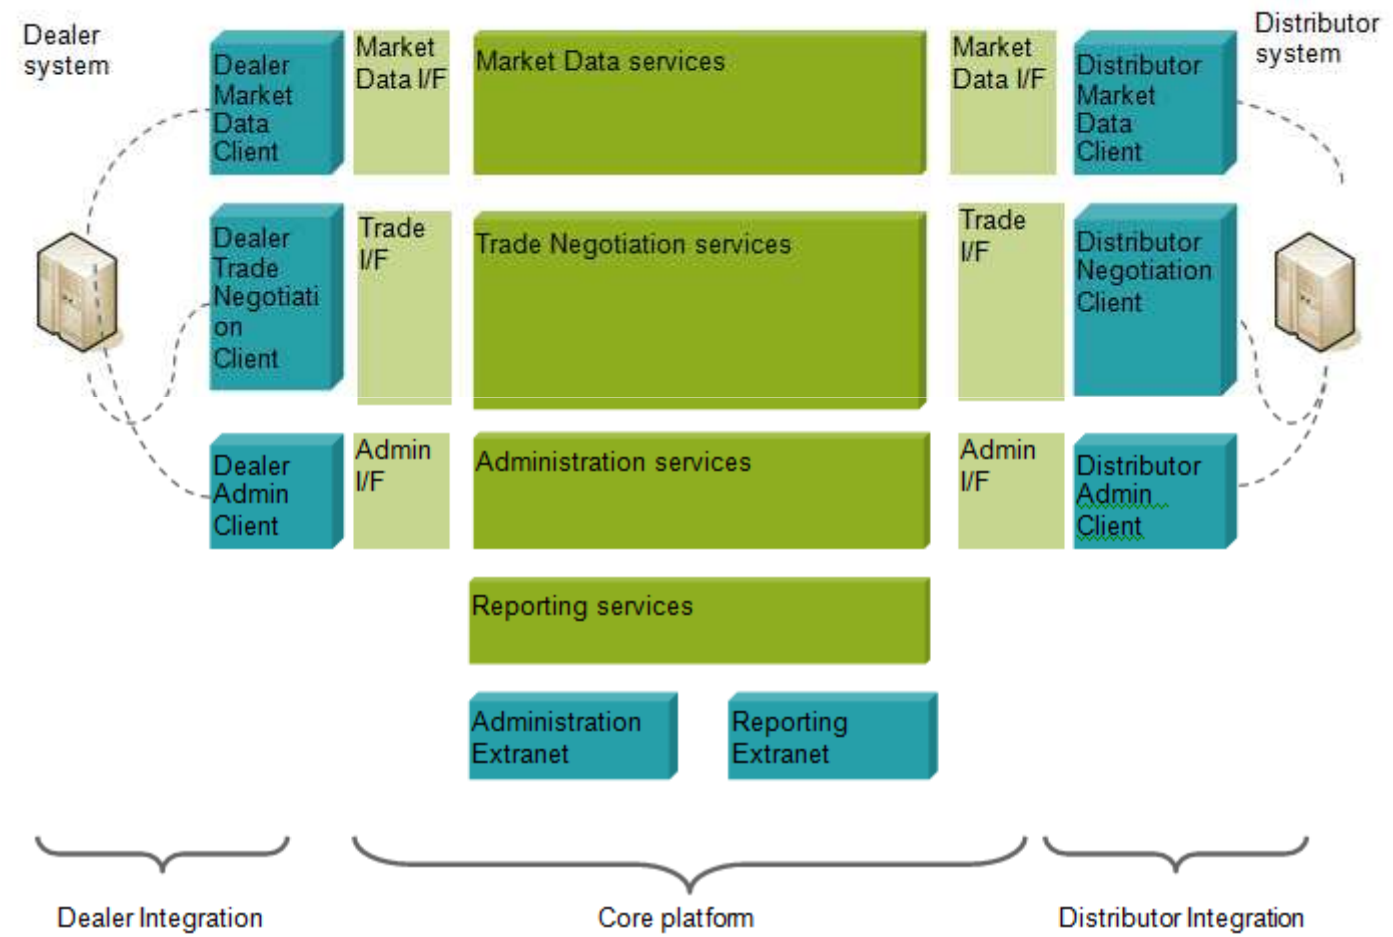

Key Challenges

- Performance
 - Trade negotiation is time-sensitive, < 100 ms latency required
 - Year one volume 20,000 msg/s scaling to 100,000 msg/s by year five.
- Reliability
 - No loss of trade messages / transactions
- Ease Of Integration
 - Dealers and Distributors
- Availability
 - 99.99%
- Time To Market
 - Go Live Sept 2007 (9 months!)

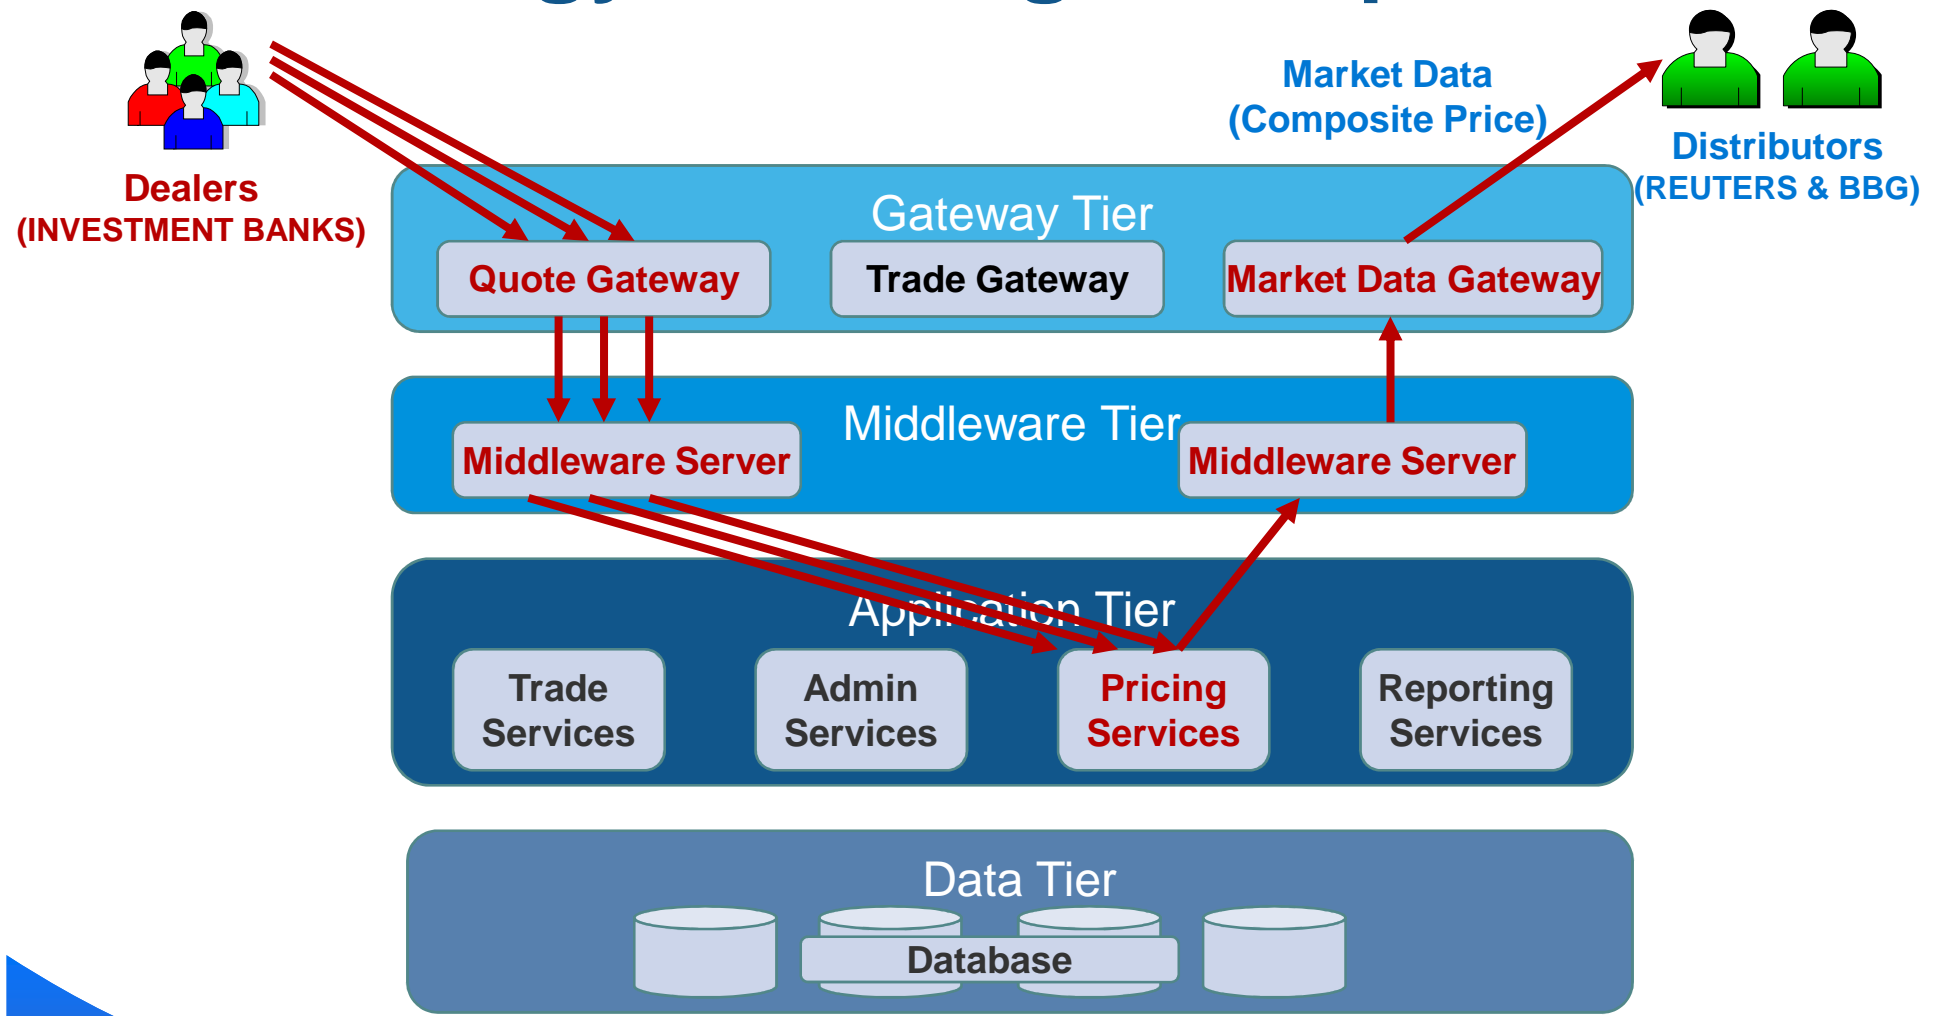

Key Challenges - Implementation

- Technology partner needed to define and implement the solution:
 - Detica had a global team with a track record implementing high volume low latency systems
 - Event Driven & Real Time Architecture expertise
 - Dedicated Market Services business area
 - Combined business and technology capability

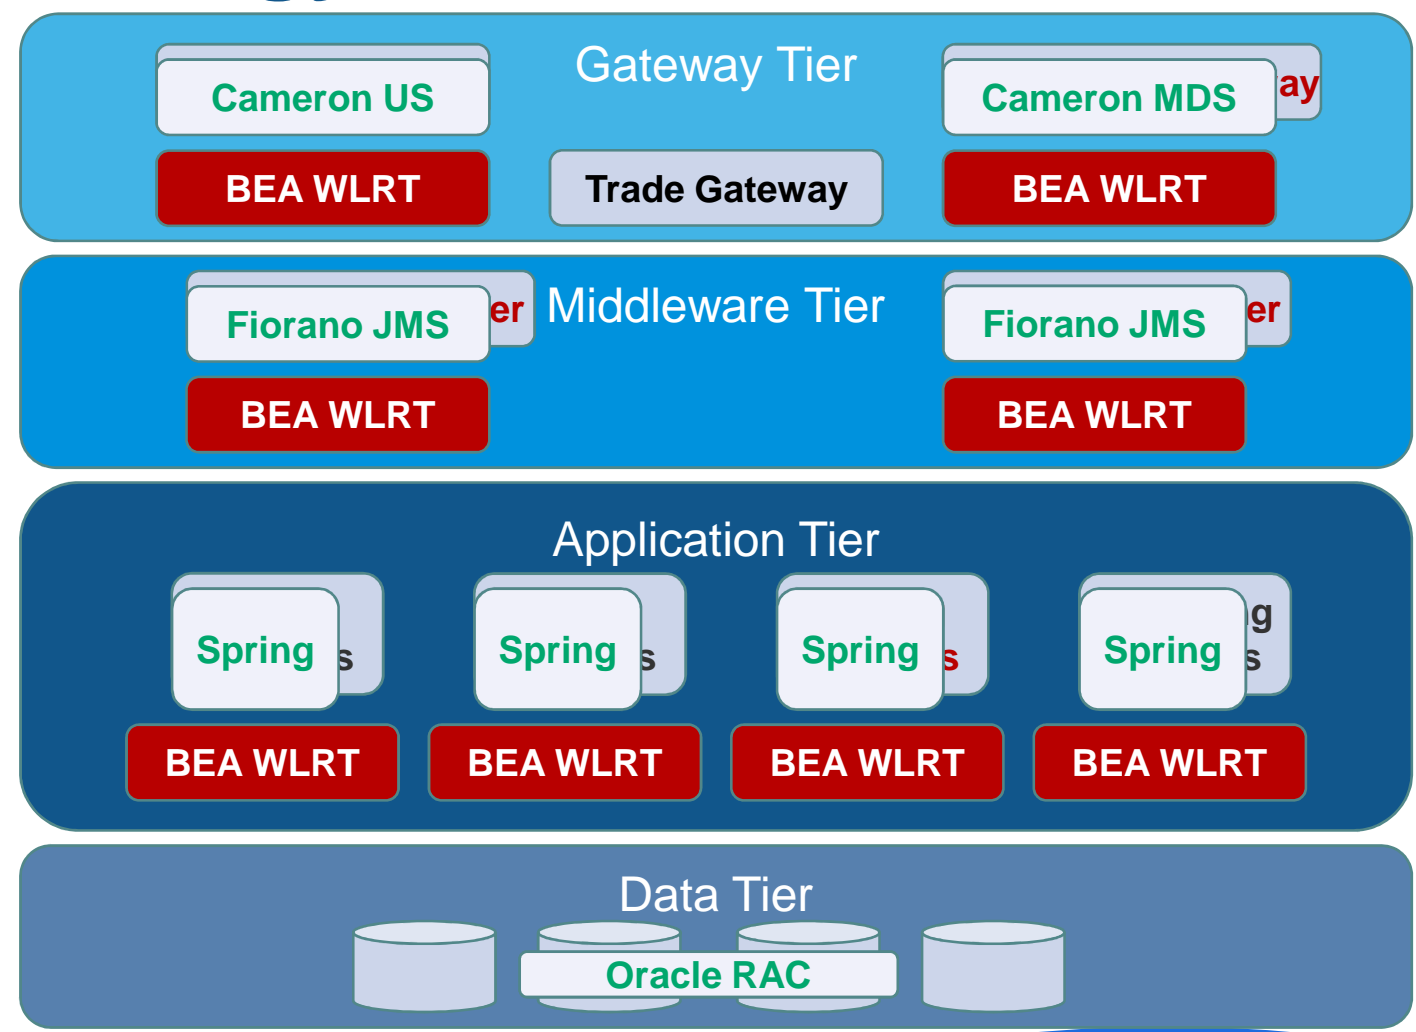

Technology – Functional Overview

Technology – Pricing Example

Technology - Products

Technology – Hardware

Key

-  HP DL360
Dual Core 2xCPU 3GHz
4GB RAM
-  HP DL580
Dual Core 4xCPU 3.4GHz
8GB RAM

Databases

Technology – Product Performance

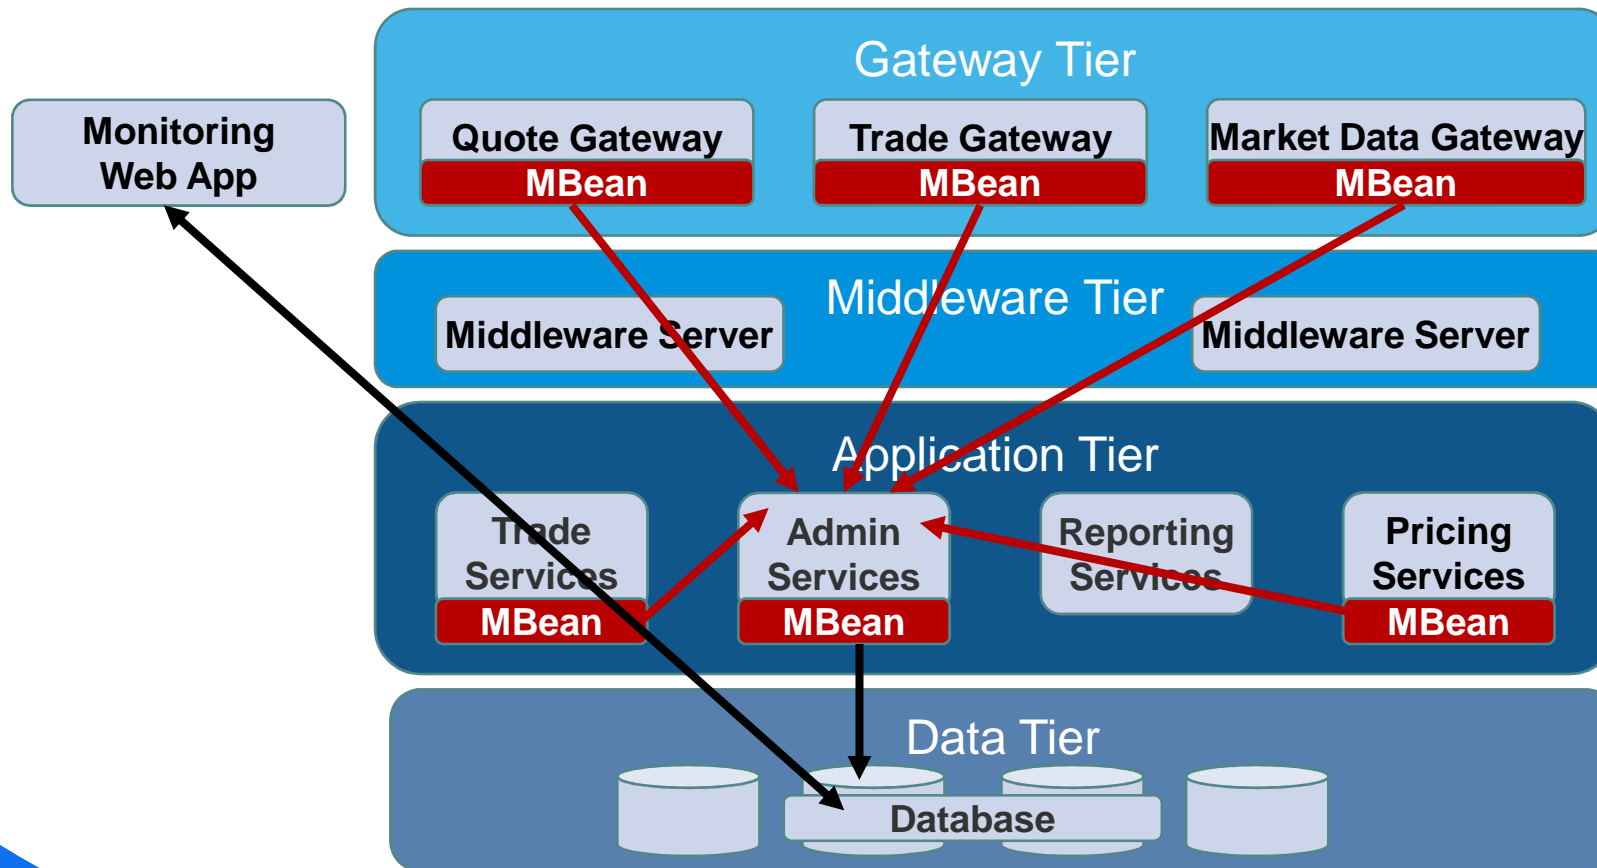

- Cameron Universal Server & Market Data Server
 - FIX Servers
 - FIX is a standard communications protocol within the Investment Banking domain but is flexible enough to be customised
 - Cameron US/MDS can handle > 25,000 msg/s
- Fiorano MQ
 - Pure JMS Server
 - Can handle > 80,000 non-persistent msg/s

Technology – Product Performance

- WebLogic Real Time provided a huge performance improvement compared to standard Sun JVM
 - **With** -15ms latency
 - **Without** - significantly > 100ms latency
- Underpinned key components in each tier
 - FIX Gateway Servers
 - JMS Servers
 - Spring
- Made Java solution a feasible and good choice for this system.
- System handling ~ 25,000 msg/s with 95th percentile latency ~15ms

Performance Monitoring

- JMX Monitoring Framework

Performance Monitoring

- Administration Application provides detailed statistics on:
 - Latency
 - Per message type
 - Per component if required
 - Throughput
 - Server/Service Status
- Provides an easily understandable dashboard for LiquidityHub staff.

Outcome

- Designed, built and delivered the system in 9 months.
- System meets year 1 peak performance targets
 - Current latency figures 4 – 8ms
- System can scale to much higher message volumes
- Phase 4 currently in progress

Lessons Learned

- Create more testing tools
 - Distributor GUI test harness
 - Log search & view
- Early prototyping helped de-risk the architecture
- Consider virtualization
- Managing 17 organisations is not easy!
 - Weekly tech forums worked well

Questions?

Tony Harrop
