```

Keeping the good parts
Improving the bad

set

Summary

define and show settings

Synopsis

```
set [setting] [value]
```

Parameters

setting

The name of the setting to display or alter

value

The new value for the chosen setting

```
{ } > set|
```

test A test setting

historyLength How many typed commands do we recall for reference?

tabstop The distance in characters between each tab

historyTimeMode Display number|date|none next to each historical instruction

minConsoleHeight The maximum size (in pixels) for the command line output area

maxConsoleHeight The minimum size (in pixels) for the command line output area

{ } > set mm

`maxConsoleHeight` The minimum size (in pixels) for the command line output area

```
{ } > set maxConsoleHeight
```

```
{ } > vcs checkout -p *****
```

Command Line

> vcs checkout
