

# Extending Cloud Foundry with new Services

#cloudcredo  
#cloudfoundry

# Roadmap

- What is Cloud Foundry?
- Why would I want one?
- Your PaaS should be hackable
- Extending with new Services
- The Future

# Why Cloud Foundry

- Power to developers
- Powerful simple clients

# Where can we use this...

# Features of a PaaS

- Your PaaS should be hackable

# Services

mongoDB

```
libs — bash — 92x31
bash
$ vmc apps

+-----+-----+-----+-----+-----+
| Application | #   | Health | URLs           | Services |
+-----+-----+-----+-----+-----+
| qcon        | 1   | N/A    | qcon.vcap.me   |          |
+-----+-----+-----+-----+-----+

$ v
```

# Service Extension options...

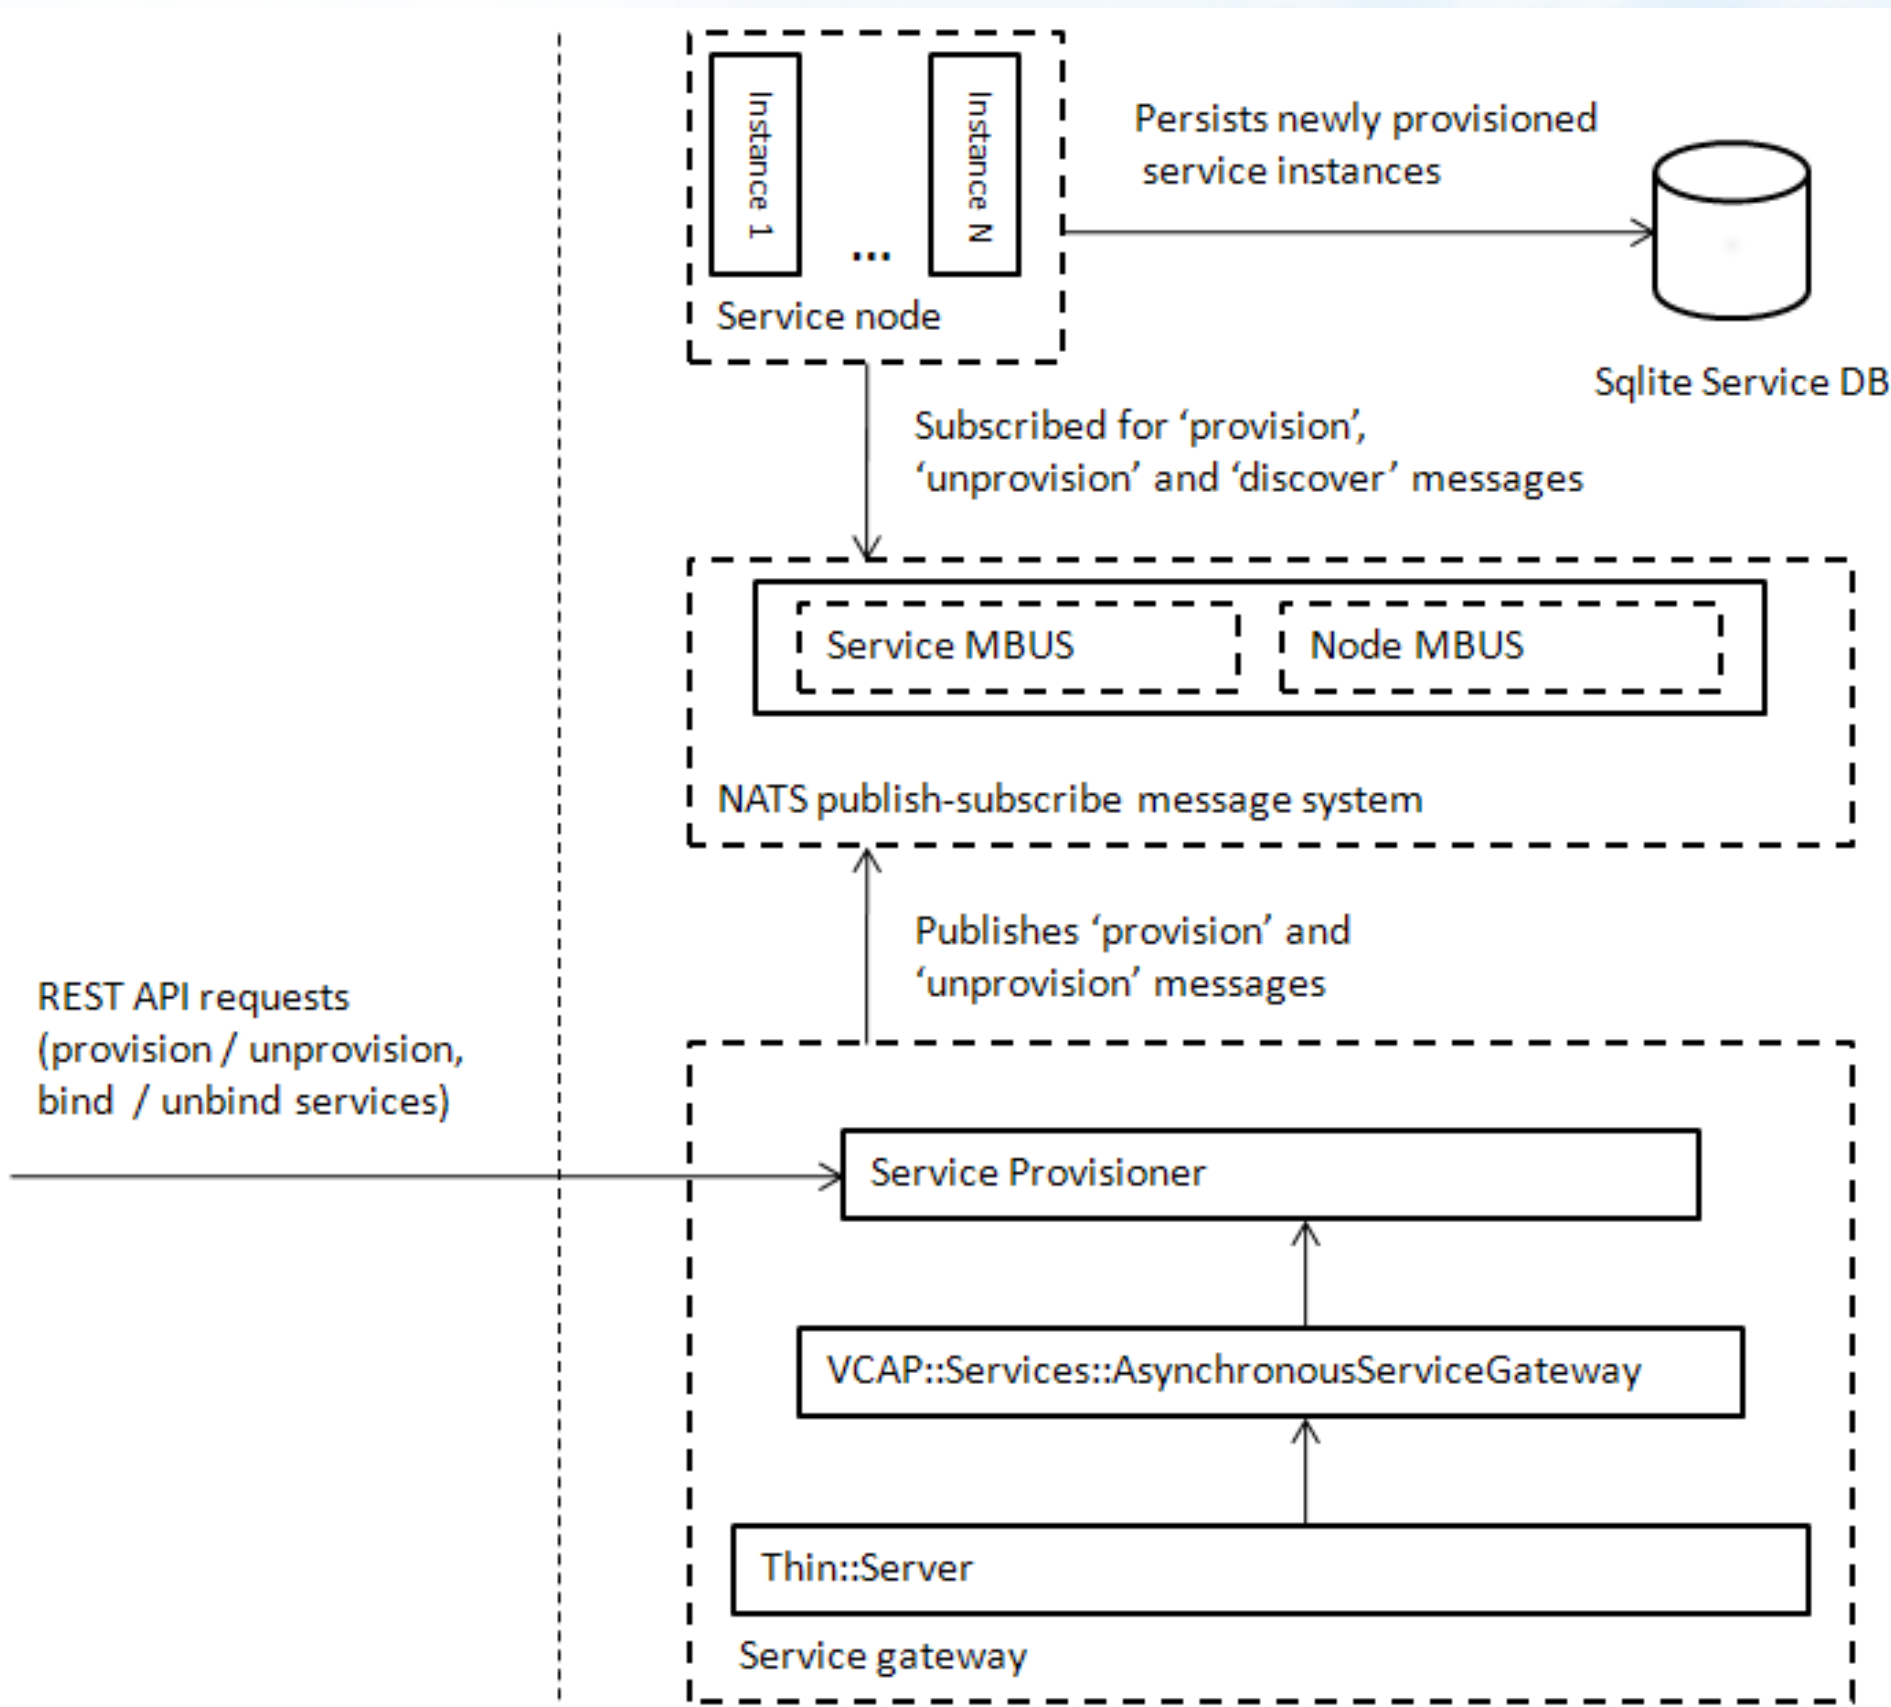

- Static service: cruffy but straightforward

# Service Extension options...

- Service broker: a more elegant facade over existing services

# Service Extension options...

- First-class service support: super awesome, cleaner and more maintainable

# Service Node API

- provision/unprovision
- bind/unbind
- enable\_instance/disable\_instance
- announcement

# Testing

- Unit
- Integration
- Yeti - End to end testing
- Stac2 - Load testing

# Deploying Services

- Bosh
- Chef

# The Future

- Build packs

# Recap

- What is Cloud Foundry?
- Why would I want one?
- Your PaaS should be hackable
- Extending with new Services
