spring

The High Velocity Web Framework For Java and Scala

Typesafe

Scala

ZENEXITY

"We've found that Play is one of the few frameworks that is able to maintain the delicate balance of performance, reliability, and developer productivity"

LinkedIn

used in mission critical apps! (tm)

```
(defroutes main-routes

    (GET "/" [] (str "Powered by Clojure" ))
    (route/not-found "Page not found")   )

(def app
    (handler/api main-routes))

(defn -main [port]
    (run-jetty app {:port (Integer.port)}))
```

```
(defroutes main-routes

    (GET "/" [] (str "Powered by Clojure" ))
    (route/not-found "Page not found")   )

(def app
    (handler/api main-routes))

(defn -main [port]
    (run-jetty app {:port (Integer.port)}))
```

has

Spring

has Akka

has Servlets

has netty

has Conventions

has a Static Environment

has a Dynamic Environment

has

GORM

is Stateless

has plugins

has (lots of) plugins

Complex

does Spring

does Spring ... for Java

Debbie does...

does Groovy

does Groovy and Java

does Groovy
and Java
at the same time

does Scala

does Scala
and Java

does Scala
and Java
at the same time

does async

does war

does war files

In Summary

Play is good for async

Play is good for Scala and Java

Grails is good for Groovy and Java

Grails is good for DBs
(not Debbie)

Both are good

Both are different

Decide

Thank-you
