Why Me?

DEVOPS BLOG

Karōjisatsu

By John Willis

About 7 years ago, I moved back to Atlanta. The cloud thing was just getting started and I decided to start a local cloud meetup group. One of the earlier attendees was a gentleman named Walter. Walter was one of the more passionate participants in the early days of the meetup. It turns out that Walter was a hardworking independent consultant that had worked in the Atlanta area for some time. He was trying to build a consulting company with an interesting idea where he would recruit graduates from rural universities that had strong CS departments. One of the universities he was working with was Valdosta State University (VSU). Walter had invited me to give a talk about Cloud Computing to

Occupational burnout

From Wikipedia, the free encyclopedia

Not to be confused with [Occupational burning](#).

Burnout is a type of [psychological stress](#). **Occupational burnout** or **job burnout** is characterized by [exhaustion](#), lack of [enthusiasm](#) and [motivation](#), feelings of ineffectiveness, and also may have the dimension of [frustration](#) or [cynicism](#), and as a result reduced [efficacy](#) within the workplace.^[1]

The term *burnout* in psychology was coined by [Herbert Freudenberger](#) in his 1974 *Staff burnout*, presumably based on the 1960 novel *A Burnt-Out Case* by [Graham Greene](#), which describes a protagonist suffering from burnout.^{[2][3]}

More recently the term *brownout*^[4] has been used in the business world to describe a less serious version of *burnout*. It refers to staff who are disengaged and demotivated in their job role.

Occupational burnout is typically and particularly found within human service professions. Professions with high levels of burnout include social workers, nurses, teachers, lawyers, engineers, physicians, customer service representatives, and police officers.^[5] One reason why burnout is so prevalent within the [human services](#) field is due in part, to the high-stress work environment and emotional demands of the job.^[1]

Maslach and her colleague, Michael Leiter, defined the antithesis of burnout as [engagement](#).^[6] Engagement is characterized by energy, involvement and [efficacy](#), the opposites of exhaustion, cynicism and inefficacy.^[6] Bakker et al. (2014) in *Burnout and Work Engagement: The JD–R Approach* makes the same argument as Leiter.

Three Dimensions (Maslach)

- **Exhaustion**
 - Emotional exhaustion
- **Cynicism**
 - Depersonalization
- **Efficacy**
 - Personal Accomplishment

MBI

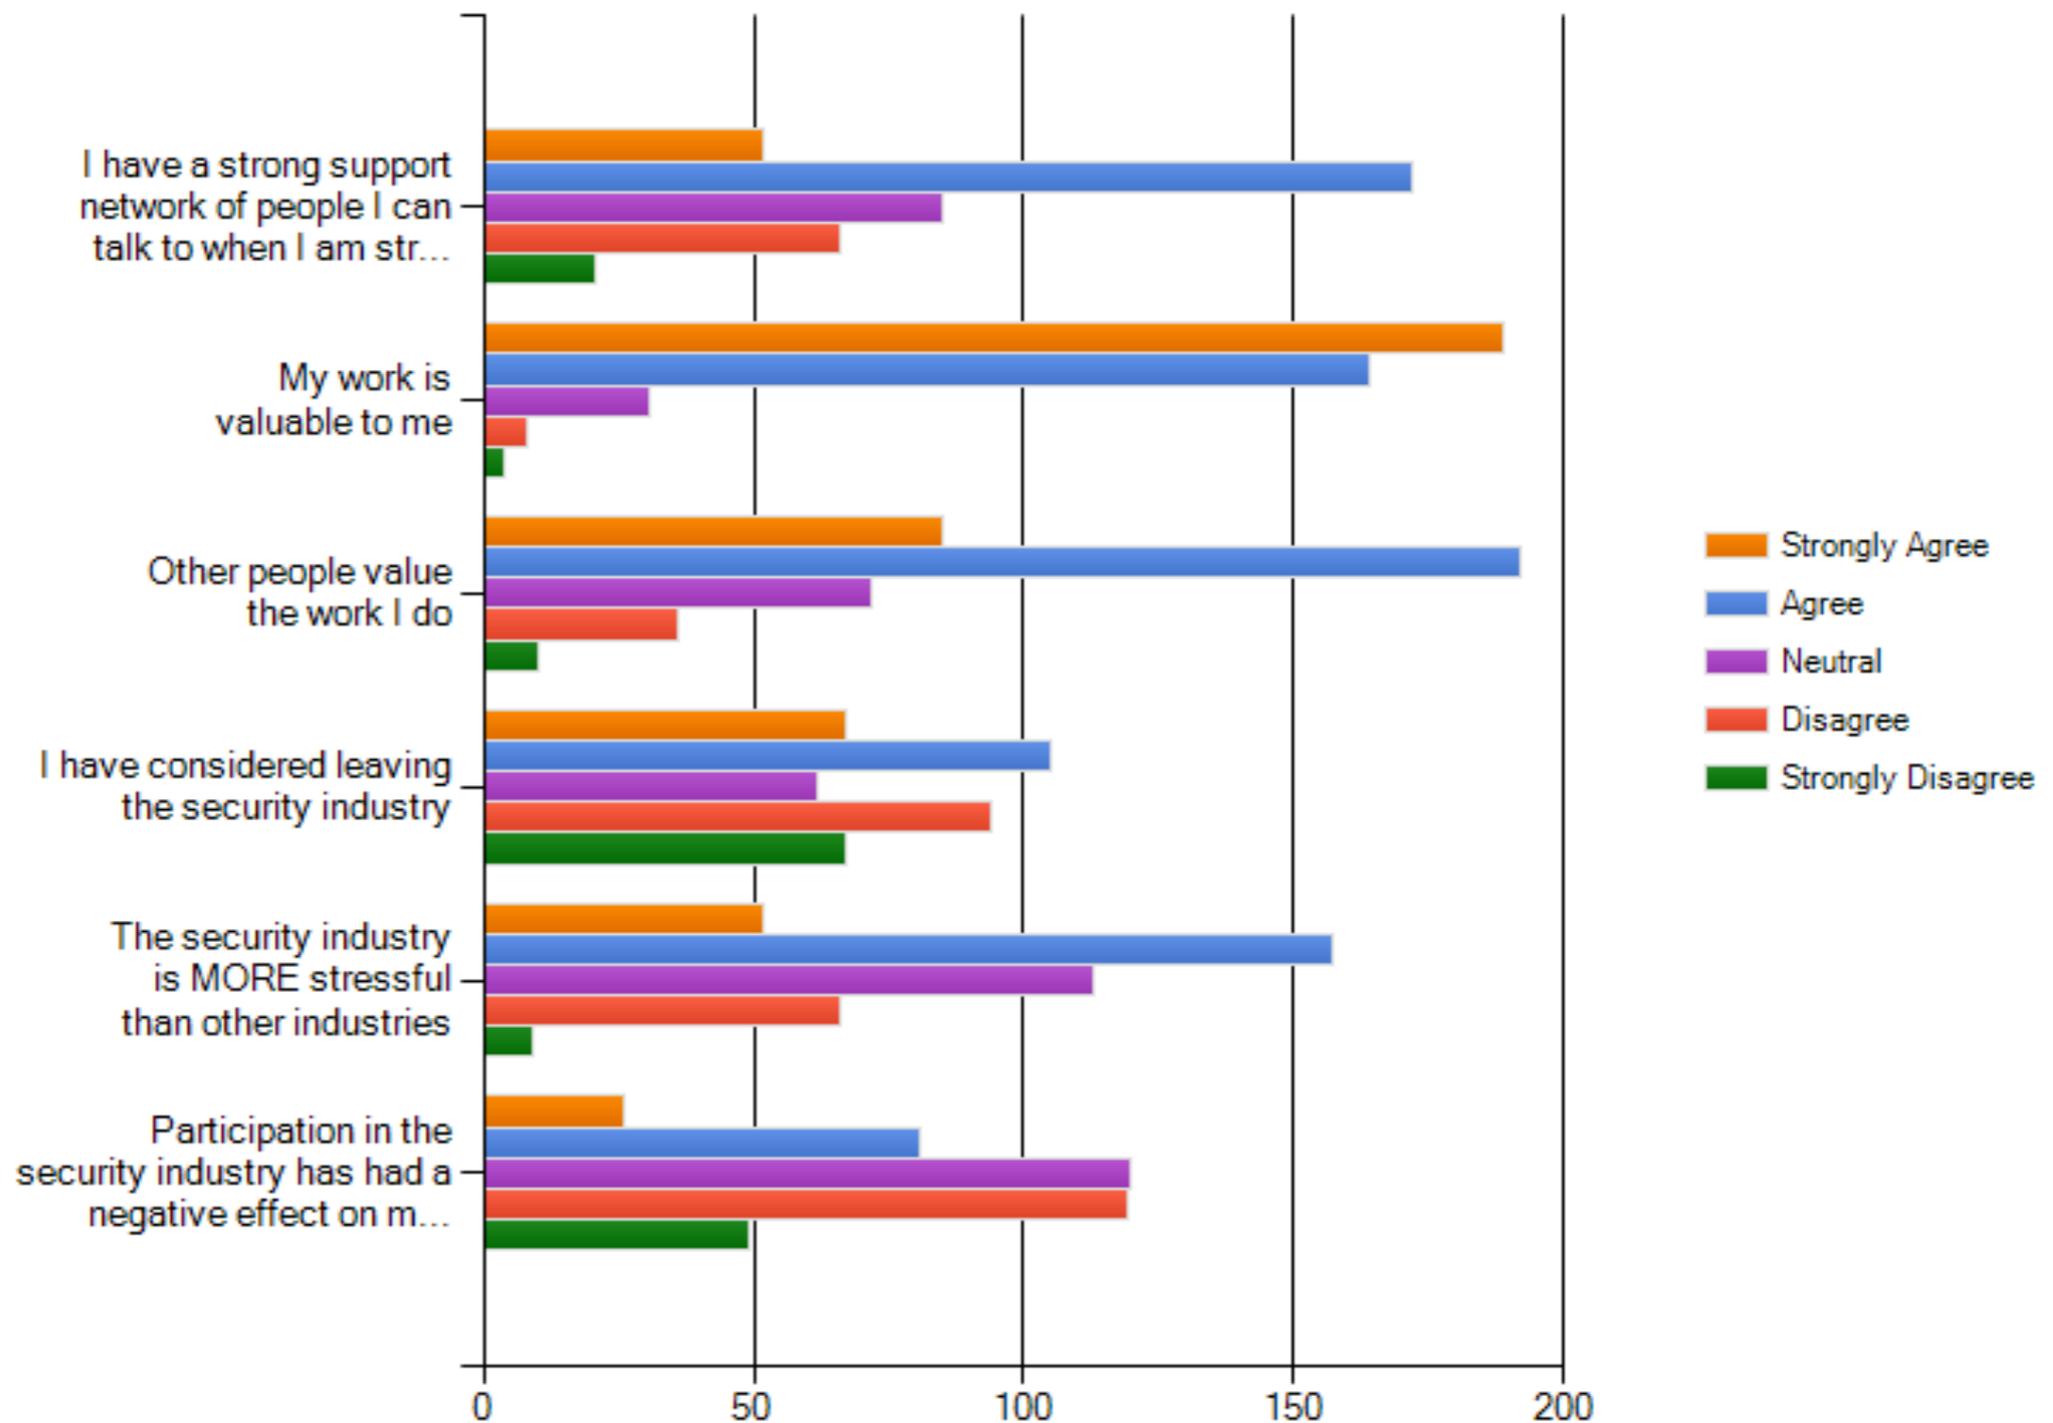

Maslach Burnout Inventory

Authors: Christina Maslach, Susan E. Jackson, Michael P. Leiter, Wilmar B. Schaufeli, & Richard L. Schwab

Recognized for more than a decade as the leading measure of burnout, the Maslach Burnout Inventory (MBI) incorporates the extensive research that has been conducted in the more than 25 years since its initial publication. The MBI Surveys address three general scales:

- **Emotional Exhaustion** measures feelings of being emotionally overextended and exhausted by one's work
- **Depersonalization** measures an unfeeling and impersonal response toward recipients of one's service, care treatment, or instruction
- **Personal Accomplishment** measures feelings of competence and successful achievement in one's work.

Please respond to the following:

Burnout in Information Security

My MBI

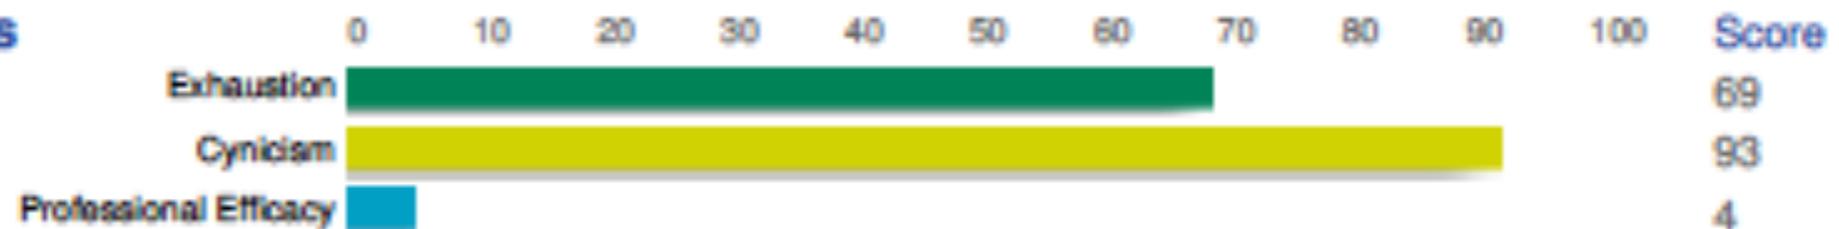

John Willis

How You Rated Yourself on Burnout Compared to Norms

Following are percentile scores for the three MBI-GS scales compared to a general population of over 19,000 people across a diversity of occupations. Percentile means that this percentage of people rated themselves as having less frequency of what the scale is measuring. Thus, a lower score on Exhaustion or Cynicism would be indicative of **less** burnout whereas a lower score on Professional Efficacy would mean **more** burnout. For example, the 92nd percentile on Exhaustion means that 92% of people rated themselves as having less frequency on Exhaustion than you did on the scale.

If you fall in the top 10% (or bottom 10% for Professional Efficacy) you should take action to decrease your feelings of burnout.

MBI-GS Scales

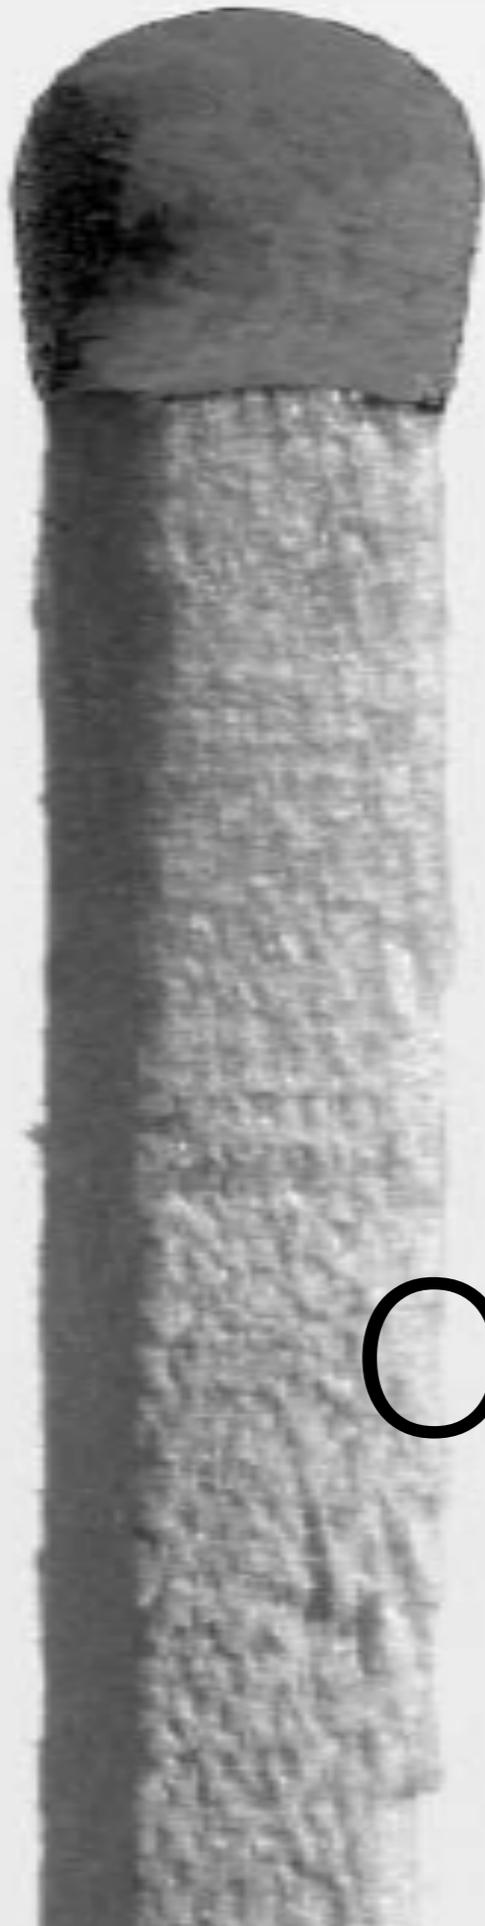

But wait!

There's more!

Six Mismatches

- **Work Overload**
- **Lack of Control**
- **Insufficient Reward**
- **Breakdown of Community**
- **Absence of Fairness**

Mismatch - Self Assessment

Quick Burnout Assessment

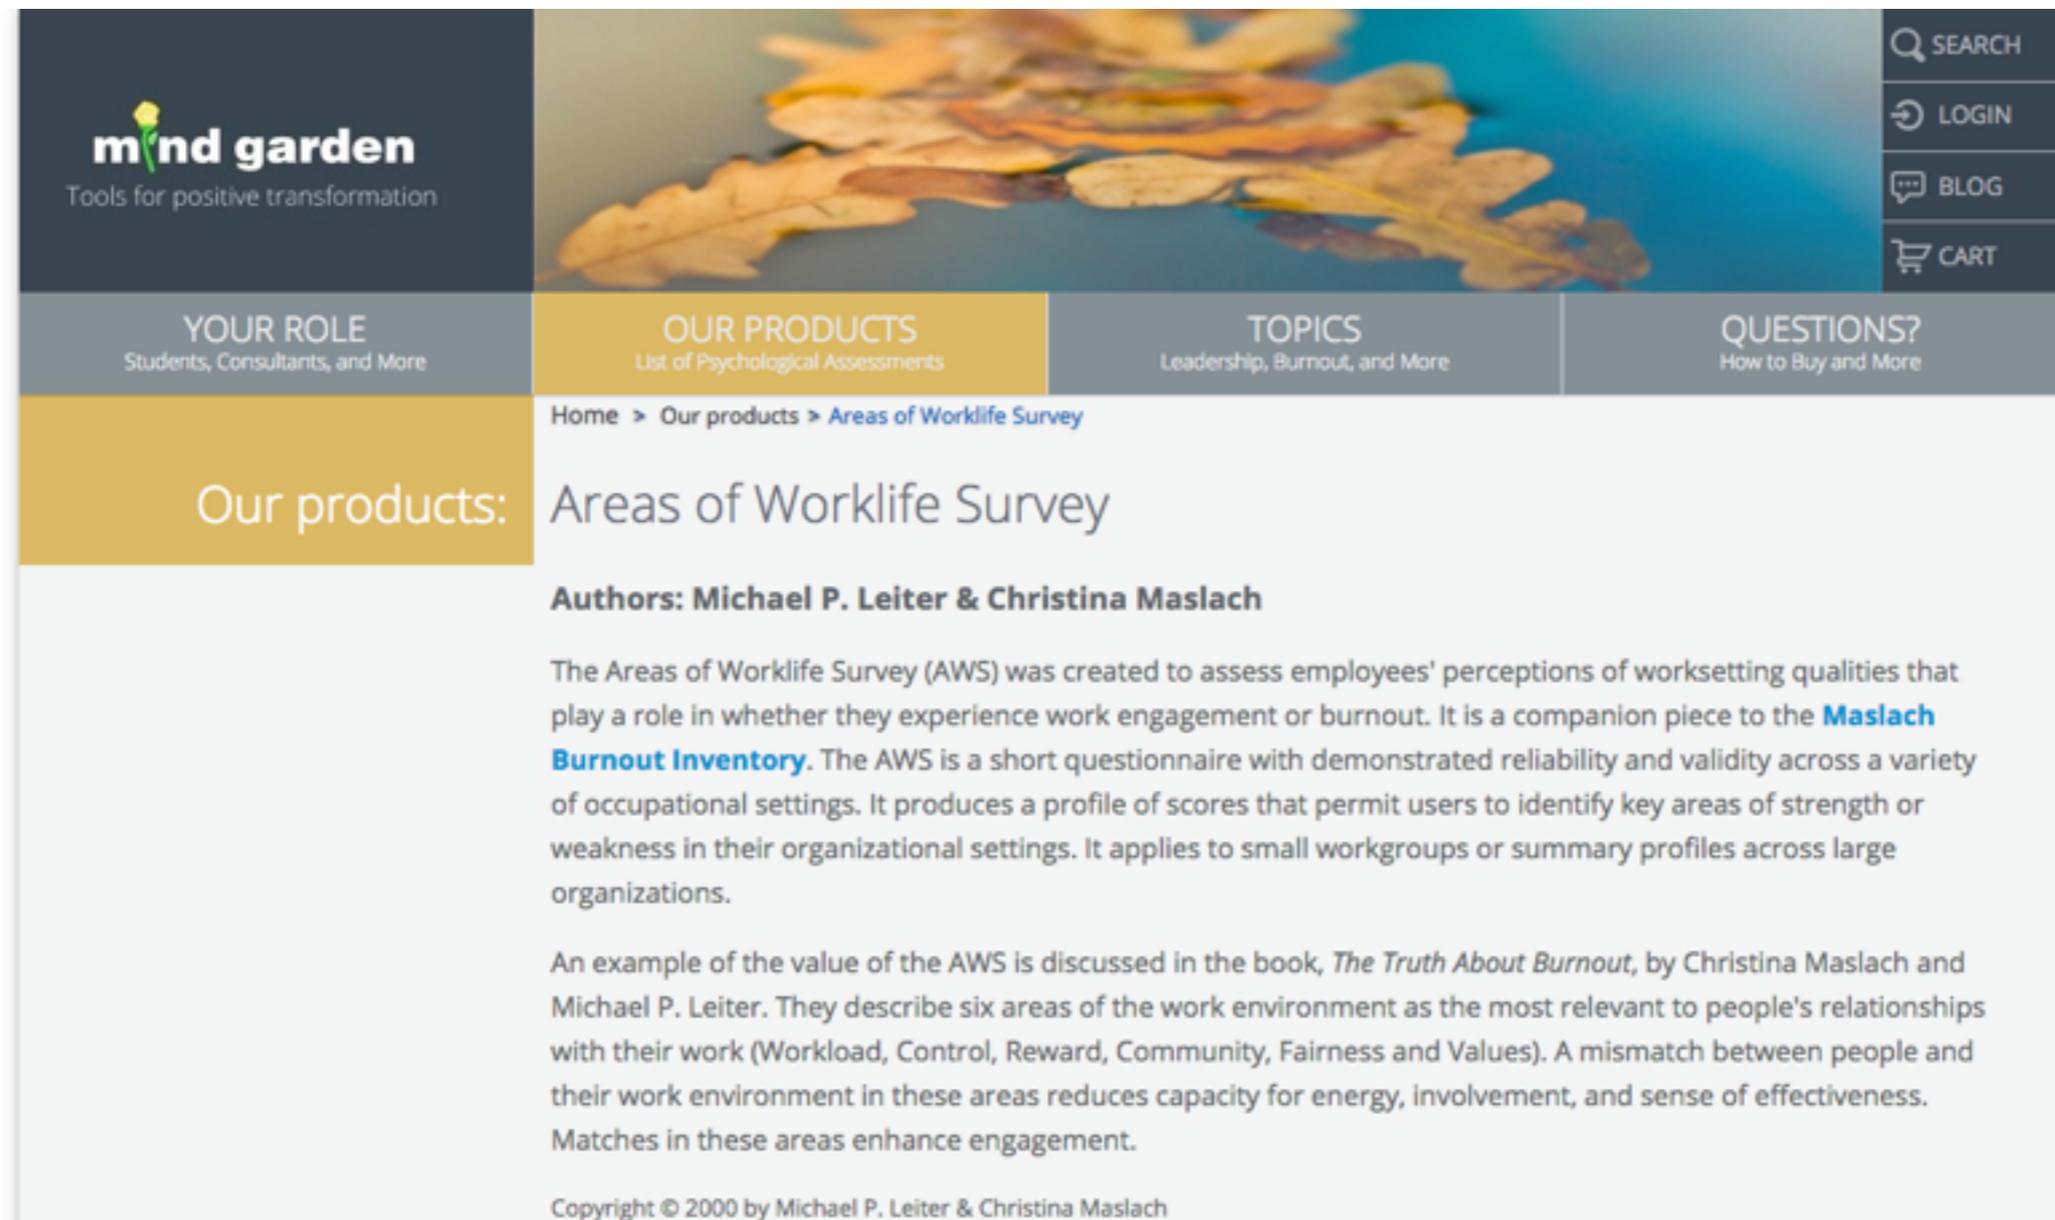

To give an idea of how we assess burnout, here are a few items from our book, *"Banishing Burnout: Six Strategies for Improving Your Relationship With Work."* Please note, however, that this is not a complete survey.

For each item, think about how your current work matches up with your personal preferences, work patterns, and aspirations.

	Just Right	Mismatch	Major Mismatch
Workload			
The amount of work to complete in a day			
The frequency of surprising, unexpected events			
Control			
My participation in decisions that affect my work			
The quality of leadership from upper management			
Reward			
Recognition for achievements from my supervisor			
Opportunities for bonuses or raises			
Community			
The frequency of supportive interactions at work			
The closeness of personal friendships at work			
Fairness			
Management's dedication to giving everyone equal consideration			
Clear and open procedures for allocating rewards and promotions			
Values			
The potential of my work to contribute to the larger community			
My confidence that the organization's mission is meaningful			

- If everything is a match, you have found an excellent setting for your work
- A few mismatches are not very surprising. People are usually willing and able to tolerate them
- A lot of mismatches, and especially major mismatches in areas that are very important to you, are signs of a potentially intolerable situation

AWS - Survey

The screenshot displays the Mind Garden website interface. The top navigation bar includes a search bar, login, blog, and cart links. The main navigation menu features sections for 'YOUR ROLE', 'OUR PRODUCTS', 'TOPICS', and 'QUESTIONS?'. The 'OUR PRODUCTS' section is highlighted, and the breadcrumb trail shows the path: Home > Our products > Areas of Worklife Survey. The product title 'Areas of Worklife Survey' is prominently displayed, followed by the authors' names: Michael P. Leiter & Christina Maslach. The text describes the survey's purpose, its relationship to the Maslach Burnout Inventory, and its application in organizational settings. A reference to the book 'The Truth About Burnout' is also included. The copyright notice at the bottom reads: Copyright © 2000 by Michael P. Leiter & Christina Maslach.

Our products: Areas of Worklife Survey

Authors: Michael P. Leiter & Christina Maslach

The Areas of Worklife Survey (AWS) was created to assess employees' perceptions of worksetting qualities that play a role in whether they experience work engagement or burnout. It is a companion piece to the **Maslach Burnout Inventory**. The AWS is a short questionnaire with demonstrated reliability and validity across a variety of occupational settings. It produces a profile of scores that permit users to identify key areas of strength or weakness in their organizational settings. It applies to small workgroups or summary profiles across large organizations.

An example of the value of the AWS is discussed in the book, *The Truth About Burnout*, by Christina Maslach and Michael P. Leiter. They describe six areas of the work environment as the most relevant to people's relationships with their work (Workload, Control, Reward, Community, Fairness and Values). A mismatch between people and their work environment in these areas reduces capacity for energy, involvement, and sense of effectiveness. Matches in these areas enhance engagement.

Happiness

Matthieu Ricard

FOREWORD BY

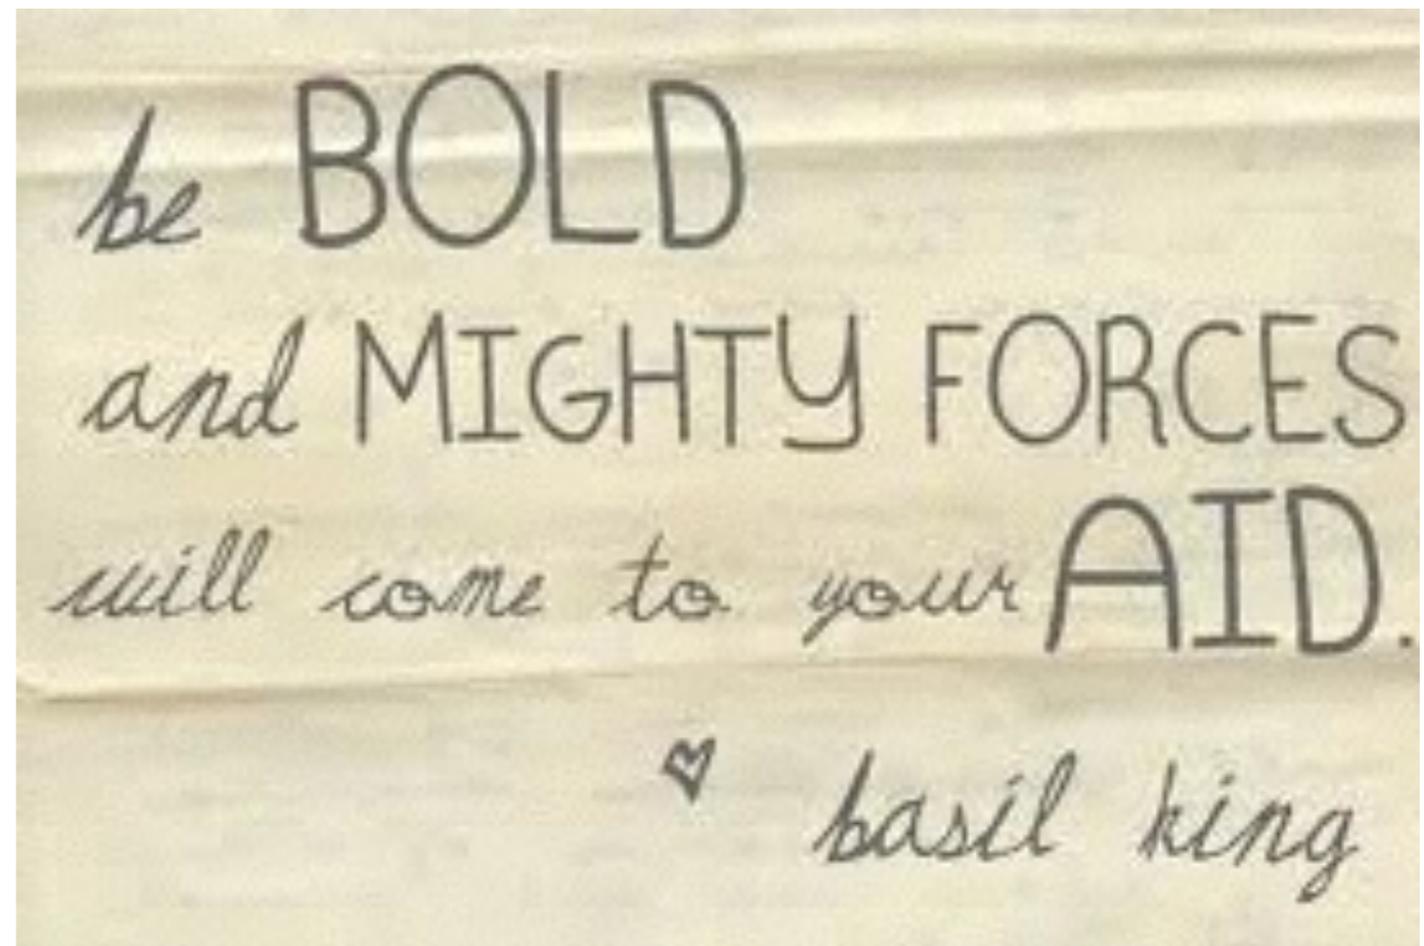

DANIEL GOLEMAN

"In a brilliant synthesis of 25 centuries of the wisdom of Buddhism with the neuroscience and cognitive psychology of the 21st century, Matthieu Ricard, who embodies both traditions, gives humanity a gift it desperately needs: more a vision of a positive human future."

—MARTIN SELIGER, PhD, author of *Authentic Happiness*

How can you help others?

- **Talk Talk Talk**
- **Listen Listen Listen**
- **Be Vulnerable**
- **Be Courageous**
- **Be Kind**

1

Psychological Safety

Team members feel safe to take risks and be vulnerable in front of each other.

2

Dependability

Team members get things done on time and meet Google's high bar for excellence.

3

Structure & Clarity

Team members have clear roles, plans, and goals.

4

Meaning

Work is personally important to team members.

5

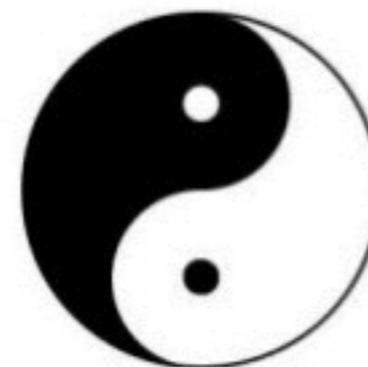

Impact

Team members think their work matters and creates change.

Wild
Speculation

Psychometrics is a field of study concerned with the theory and technique of psychological measurement. One part of the field is concerned with the objective measurement of skills and knowledge, abilities, attitudes, personality traits, and educational achievement.

Psychometrics - Wikipedia, the free encyclopedia

<https://en.wikipedia.org/wiki/Psychometrics>

Westrum Model

Pathological	Bureaucratic	Generative
Information is hidden	Information may be ignored	Information is actively sought
Messengers are "shot"	Messengers are tolerated	Messengers are trained
Responsibilities are shirked	Responsibility is compartmented	Responsibilities are shared
Bridging is discouraged	Bridging is allowed but discouraged	Bridging is rewarded
Failure is covered up	Organisation is just and merciful	Failure causes enquiry
New ideas are crushed	New ideas create problems	New ideas are welcomed

At Chef:

Some teams have started measuring Westrum Culture scores quarterly. It is also included in our yearly employee survey.

Rate how strongly you agree (7) or disagree (1) to the following statements:

1. On my team, information is actively sought.
2. On my team, failures are learning opportunities, and messengers of them are not punished.
3. On my team, responsibilities are shared.
4. On my team, cross-functional collaboration is encouraged and rewarded.
5. On my team, failure causes enquiry.
6. On my team, new ideas are welcomed.
